Education

University of British Columbia **Sep 2021 - May 2026**
BSc. Combined Major in Computer Science and Statistics *Dean's List*

Experience

Software Engineer Intern **May 2025 – Aug 2025**
Mastercard *Vancouver, British Colombia*

- Presented business proposals and built a POC for a data quality service using **AWS Redshift**, **Java**, and **Next.js** to streamline machine learning model optimization with production data
- Collaborated across engineering, data science, and product teams during organizational restructuring to define project direction and technical requirements

Software Developer Co-op **Jan 2023 – Aug 2023**
Tetra Tech *Vancouver, British Colombia*

- Addressed lack of real-time hazard monitoring by implementing full-stack alert system in **Python** and **Next.js**, which received the 2025 ACEC-BC Award of Excellence
- Developed an automated file synchronization system between **Azure** services using **React** and **Python**, reducing manual work by 45 minutes daily
- Optimized **PostgreSQL** database performance by implementing PostGIS, resulting in 30% faster query times
- Led deployment and scaling of a web application to 1000+ users using **Azure Linux** VM and **Azure** BlobFuse
- Architected and implemented a data processing pipeline for an AI model, reducing preprocessing times by 90%

Club Experience

Strategy Software Developer **Sep 2023 – Jan 2025**
UBC Solar (Design Team) *Vancouver, British Columbia*

- Created genetic algorithms with **Python** for race speed optimization, which contributed to our team's highest-ever placement at the Formula Sun Grand Prix 2024
- Built cross-platform desktop application using **Electron** and **React** for race data and simulation visualization

Projects

StyleSense | *TypeScript, Rust*

- Built a real-time code style enforcer for VSCode with customizable style rules with multilingual support
- Created the extension with **TypeScript** and used **Rust** to create a language server with tree-sitter parsing

Breathe App (Hackathon) | *React, TypeScript, Python, Flask, C++*

- Built full-stack air quality application with **React** and **Flask**, integrating real-time sensor data
- Implemented websocket communication between **C++** sensor interface and **Python** backend

Track My Form | *TensorFlow, React, TypeScript*

- Implemented **TensorFlow** pose estimation model for real-time movement analysis and exercise form feedback
- Developed trackers with **React** for exercise repetition counting and form assessment using AI output landmarks

Hoppon Bot | *Python, AWS EC2, Docker*

- Created a Discord bot with **Python**, containerized with **Docker** and deployed on **AWS** EC2
- Implemented music streaming functionality using Spotify and YouTube APIs with automated queue system

Skills

Languages: Java, Python, JavaScript, TypeScript, C++, C, Rust, SQL
Full-Stack Development: React, React Native, Next.js, Node.js, Express.js, Flask
Databases & Cloud: PostgreSQL, Firebase, AWS, Azure Cloud
DevOps & Testing: Git, Docker, Linux, Postman, JUnit, Mocha, Chai
